true value x_i^{true}
imputed $\hat{x}_i$
reference data
(d) $\nu_{ijk} = 1,\ \Delta_i > 0$
(c) $\nu_{ijk} = 0,\ \Delta_i > 0$
$\pi_g(y_i \mid x) = 0.5$
(a) consistent
(b) $\nu_{ijk} = 1,\ \Delta_i < 0$
$\mathbb{E}[x_j \mid x_k] \pm \delta_{j|k}$
imputed feature x_j
observed partner feature x_k
confidence in true class $\pi_g(y_i \mid x)$
